

TPE1200 manual Peeling Machine

Specially designed for cured sausages

The TPE1200 Manual Peeling Machine is a compact, portable unit designed to aid the removal of the tips with the clips and the casings from cured sausage logs in a quick and efficient manner.

It ensures uniform results and greatly reduces the physical stress as well as the risks for the operators handling the sausage logs. No external tools are required. It is easy to use and has a double push-button start to ensure operator safety.

The end cap-cutting system is adjustable. The casings are inflated, and a lineal cutter slits the casing for easy removal by hand, all in one simple operation.

TECHNICAL FEATURES

PRODUCT TYPE	CURED SAUSAGES – CYLINDRICAL PIECES
PRODUCT CALIBERS	MULTIFORMAT 40 mm – 110 mm
PRODUCT LENGTH	Minimum 700 mm – 1200 mm
